

SUNNY BANK MILLS FIBRE INTERNET

Background:

In response to woeful service from existing suppliers we have invested in a site wide fibre internet installation direct to every building. There is now genuine pure fibre metres from every office. This is similar in character to a leased line in that it is symmetrical, with upload and download speeds the same. It has very low contention rates with only Mill occupiers using it; speeds do not slow down when the kids get home from school! Above all, we wanted to give our occupiers the opportunity to have access to enterprise grade fibre internet and security at a fraction of the cost of a leased line. I have written more about the background to our Fibre service in a blog;

<http://sunnybankmills.co.uk/blog/future-proofed-fibre-internet-sunny-bank-mills/>

Fibre Internet:

We can now deliver any amount of fibre internet live to any office within 10 working days of getting a signed agreement. This means businesses can start working the day they get the keys to the new office. Prices start from £50 a month plus vat with a network service setup charge of £50 plus vat and fibre router contribution of £50 plus vat. A typical office might start with 30Mbps of symmetrical fibre at £50/month plus vat.

Sunny Bank Mill Duct Utility Charge:

We have invested heavily in the fibre and utility infrastructure, running 2 kms of trenched ducts in a loop around the mill to make a reliable, convenient system. We do not force occupiers to use our fibre internet service, however, we do stipulate that if they choose to use another provider, there will be a duct utility charge applied of £40 per month plus VAT. At the end of the lease, occupiers are to remove all third-party cabling fitted during their lease.

VoIP Telephony

We can assist with internet telephony through a number of suppliers that we know work well on our system. Prices start from £14 per user per month plus vat on a 24 month contract.

Advantages of our service

- Genuine fibre internet to your office starting from £50 a month.
- Have as much or as little bandwidth as you need
- No fixed-term fibre internet contract
- Synchronous upload and download speeds ideal for cloud computing
- Extremely low contention rates
- Stable and reliable connection with a resilient ring of fibre cables around the site
- Enterprise grade firewall.
- Fast installation of fibre internet and telephony in a fraction of the time of the established providers.
- Managed service with one call to our onsite partner, Server Centre to solve queries.

Businesses can rest assured that with the Sunny Bank Mills Fibre Internet, they have access to the very best and convenient fibre internet available in the area, managed by the people who know the site the best!
